

About this Dashboard

This model generates a 14-day forecast of the development of COVID-19 in each US state and county, and is intended to be used as one of many signals to help first responders in healthcare, the public sector, and other impacted organizations be better prepared for what lies ahead.

Access the data in [BigQuery](#) or as a CSV ([state forecasts](#), [county forecasts](#).)

Historical data for confirmed cases and deaths are powered primarily by the Johns Hopkins Coronavirus Resource Center. Historical values for hospital, ICU, and ventilator usage are powered primarily by the COVID Tracking Project.

Vaccine Capacity Planning
