

About this Dashboard

This model generates a 14-day forecast of the development of COVID-19 in each US state and county, and is intended to be used as one of many signals to help first responders in healthcare, the public sector, and other impacted organizations be better prepared for what lies ahead.

Access the data in [BigQuery](#) or as a CSV ([state forecasts](#), [county forecasts](#).)

Historical data for confirmed cases and deaths are powered primarily by the Johns Hopkins Coronavirus Resource Center. Historical values for hospital, ICU, and ventilator usage are powered primarily by the COVID Tracking Project.

In order to download or use the forecasts, you must agree to the Google [Terms of Service](#).

Forecast breakdown by state

Historical data for Hospitalized, ICU, and Ventilator usage by COVID-19 patients is not available for all states. Therefore, forecasts may be less accurate for these metrics than for Deaths and Confirmed Cases.
